

Machine Tool professionals are among the most sought after by companies. The competencies behind the qualifications in this field are complex and range from the interpretation of plans to working in Industry 4.0 environments.

Our classroom proposal is based on the combination of CNC machines, mechanical design software and NC programming Alecop software, generating an efficient and motivating environment for students and tutors.

All this equipment has the following educational aims:

- CNC Programming.
- Operator skills.
- Implementation and maintenance of CNC machines.

WinUnisoft+

WinUnisoft+

VIRTUAL MACHINES

BABYPLAST

Characteristics

- Machines of different sizes and features.
- Control of machines via PC, using multi-panel software (Fanuc, Fagor, Siemens).
- Software for CNC programming and simulation in different programming languages.
- Virtual machines.
- Assembly and mechanical maintenance kits.

As well as our trainers, we distribute all the necessary material and equipment to complete your classroom/workshop.

Integral equipment

- Adjustment
- Bench grinders
- Sharpeners
- Welding drills
- Saws
- Tracing table
- Pneumatics
- CAD
- Utensils and tools
- Safety equipment
- ...

Atenea

CNC machining centre with integrated PC control

A vertical milling machine, controlled by an integrated PC, ATENEA goes one step further in bringing our training equipment closer to today's industrial world.

The integrated PC controlling the machine has multi-control software and a touch screen to provide a close-to-reality experience while remaining a safe, informative training solution for students. Optional inclusion of relevant accessories can turn the unit into a full machining centre that can be integrated into a flexible system.

Multi CNC. Programming and display of FAGOR, SIEMENS and FANUC simulators. Includes PC, touch screen and keyboard.

28 /

Technical characteristics

Longitudinal X travel	200 mm
Transversal Y travel	200 mm
Vertical Z travel	200 mm
Measurements of the work table	450 x 180 mm
Maximum spindle-table distance	320 mm
Spindle motor	Three-phase asynchronous 1.5 kW
Spindle taper	ISO 30
Spindle motor rotation speed	50-4,000 rpm
Axes advance motors	200 steps/rev
Maximum advance of axes	2,500 mm/min.
Electronic resolution	0.0025 mm.
Door opening	Automatic
Supply voltage	230 V 50/60 Hz
Dimensions of machine	1,460 x 910 x 1,870 mm
Approximate weight	400 Kg

Axes

- Double-nut, pre-tensioned ground spindles, IT5 quality
- Linear guide rails with ball recirculation.
- 1.8° step motor.

Head

- High precision bearings with 2 rows of angular contact balls.
- Max. torque: 7 Nm at 2,000 rpm.

Guard

- Pneumatically operated.

Electronic handwheel

FEED control

Optional accessories

- 8 position tool changer.
- Parts securing device. (Manual or pneumatic jaws).
- ISO-30 tool holder cones. Collets and mills.
- Cooling system.
- Silent compressor.

Customizable machine

- Vertical lathe with incorporated safety devices.
- PC, touch screen and keyboard (Wincontrol software installed).
- User's and practical manuals.
- Control software for PC.

WinUnisoft Control SOFTWARE

29 /

This software operates the machine with realistic control emulators (FAGOR, FANUC and SIEMENS).

A license of Winunisoft+ is already included with the machines.

This software allows to simulate and execute the machining of a CNC program, ISO code edited or defined by a CAD/CAM system, analysing possible errors.

The main features of WinUnisoft+ are:

- Control of machine drives.
- Assisted graphic programming for all ISO functions supported by the chosen control emulator.
- Simulation of different tool geometries.
- 3D simulation views of the workpiece, tool and paths.
- Launch program in automatic mode or block to block.
- Collision detection of the tool with the workpiece and the jaw chuck.
- Report generation.

Apart from its performance, the excellent graphic quality of the graphic 3D simulator, makes a fast comprehension possible of the performed machining operations on the workpiece.

More information in the WinUnisoft+ report.

Hermes

CNC lathe with integrated PC control

Multi CNC. Programming and display of FAGOR, SIEMENS and FANUC emulators. PC, touch-screen and keyboard included

The Hermes lathe with integrated PC and the control program on the machine itself brings the experience of using a PC-controlled industrial machine closer to reality.

Its touch screen and the interactive interface simulation on each ensure the sense of working with the real control, in addition to the advantage of using software designed to form part of the teaching/learning process.

30 /

Technical characteristics

Swing diameter	230 mm
Distance between centres	530 mm
Longitudinal Z travel	275 mm
Transversal X travel	96 mm
Spindle motor	Three-phase asynchronous 1.5 kW
Spindle rotation speed	50 - 4,000 rpm
X,Z axes motors	step 200 s/rev
Quick advance	2,500 mm/min
Tool holder turret	8 pos (12 x 12 mm)
Electronic resolution	0.0025 mm
Door opening	Manual/Automatic
Power supply	230 V 50/60 Hz
Installed power	1.9 kW
Dimensions	1,350 x 600 x 1,540 mm
Approximate weight	300 Kg.

Axes

- Rectified spindles with double nut, prestressed, IT5 quality.
- Linear guide rails with ball recirculation.
- 1.8° step motor.

Head

- High precision bearings with 2 rows of angular contact balls.
- Max. torque.: 7Nm a 2,000 rpm.

Electronic handwheel

FEED control

Optional accessories

- Manual 60 mm tail stock travel, CM2 morse taper.
- Cooling system.
- Pneumatic 110 mm diameter chuck.
- Tool holder turret with VDI quick change system.
- Automatic access door operated by pneumatic cylinder (for use in CFF).
- Tool holders and carbide inserts.
- Winunisoft editing and simulation software.

Standard configuration

- Integral casing with built-in safety devices.
- Manual 125 mm diameter chuck.
- Conventional tool holder turret.
- Set of user and programming manuals.
- Control software for PC.

WinUnisoft  **Control** SOFTWARE

31 /

This software operates the machine with realistic control emulators (FAGOR, FANUC and SIEMENS).

A license of Winunisoft+ is already included with the machines.

This software allows to simulate and execute the machining of a CNC program, ISO code edited or defined by a CAD/CAM system, analysing possible errors.

The main features of WinUnisoft+ are:

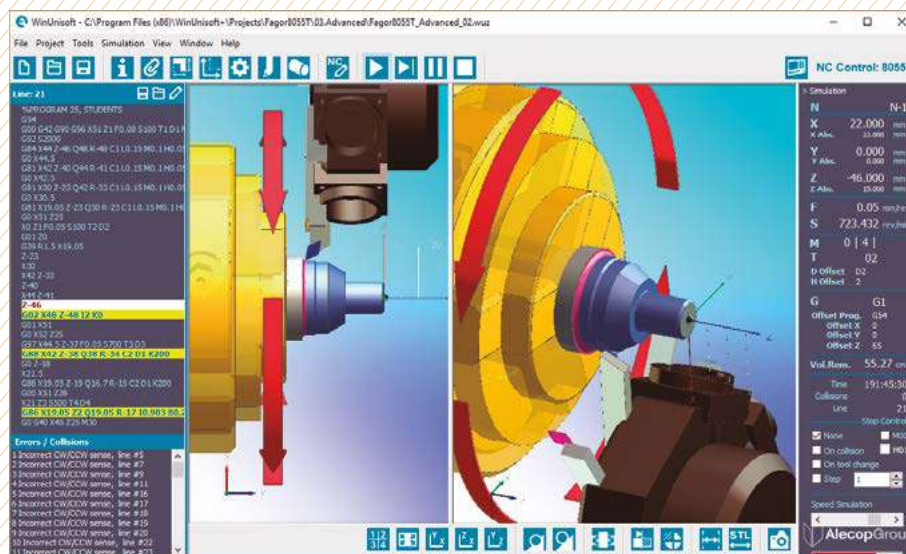

- Control of machine drives.
- Assisted graphic programming for all ISO functions supported by the chosen control emulator.
- Simulation of different tool geometries.
- 3D simulation views of the workpiece, tool and paths.
- Launch program in automatic mode or block to block.
- Collision detection of the tool with the workpiece and the jaw chuck.
- Report generation.

Apart from its performance, the excellent graphic quality of the graphic 3D simulator, makes a fast comprehension possible of the performed machining operations on the workpiece.

More information in the WinUnisoft+ part.

WinUnisoft+ Programming, simulation and control of machines

32 /

Learn how to develop your own mechanization projects using the controller of your choice: FAGOR, FANUC and SIEMENS, then complete the job using ALECOPI CNC machines.

This software package, which is the leader in its sector, is intuitive, easy to operate and produces excellent results.

One simulator – Multiple controls. FAGOR-FANUC-SIEMENS

WinUnisoft+ has been designed to train in programming of numerical control units and virtually approaches industrial reality with authentic looking control emulation.

It makes it possible to edit and simulate the CNC programs, and furthermore define tool definitions and other necessary parameters for work piece machining on a lathe or milling machine.

The excellent graphic quality of its simulator makes it possible a quick understanding of the different operations performed during machining.

Optimize your learning-time

ONE software to effectively learn multiple control types

- WinUnisoft+ has a very short learning-curve.
- Your students can be practising with different control emulators and programming in multiple languages in a unique and effective environment.
- WinUnisoft+ has been conceived to greatly speed-up the learning process.
- Using industrial control simulators for programming means too much time dedicated to learning how to run each one of them.

SIEMENS

- SINUMERIK 840D-T/M

FANUC

- FANUC Series Oi T/M

FAGOR

- FAGOR 8050-55 T/M

Integrated into the process

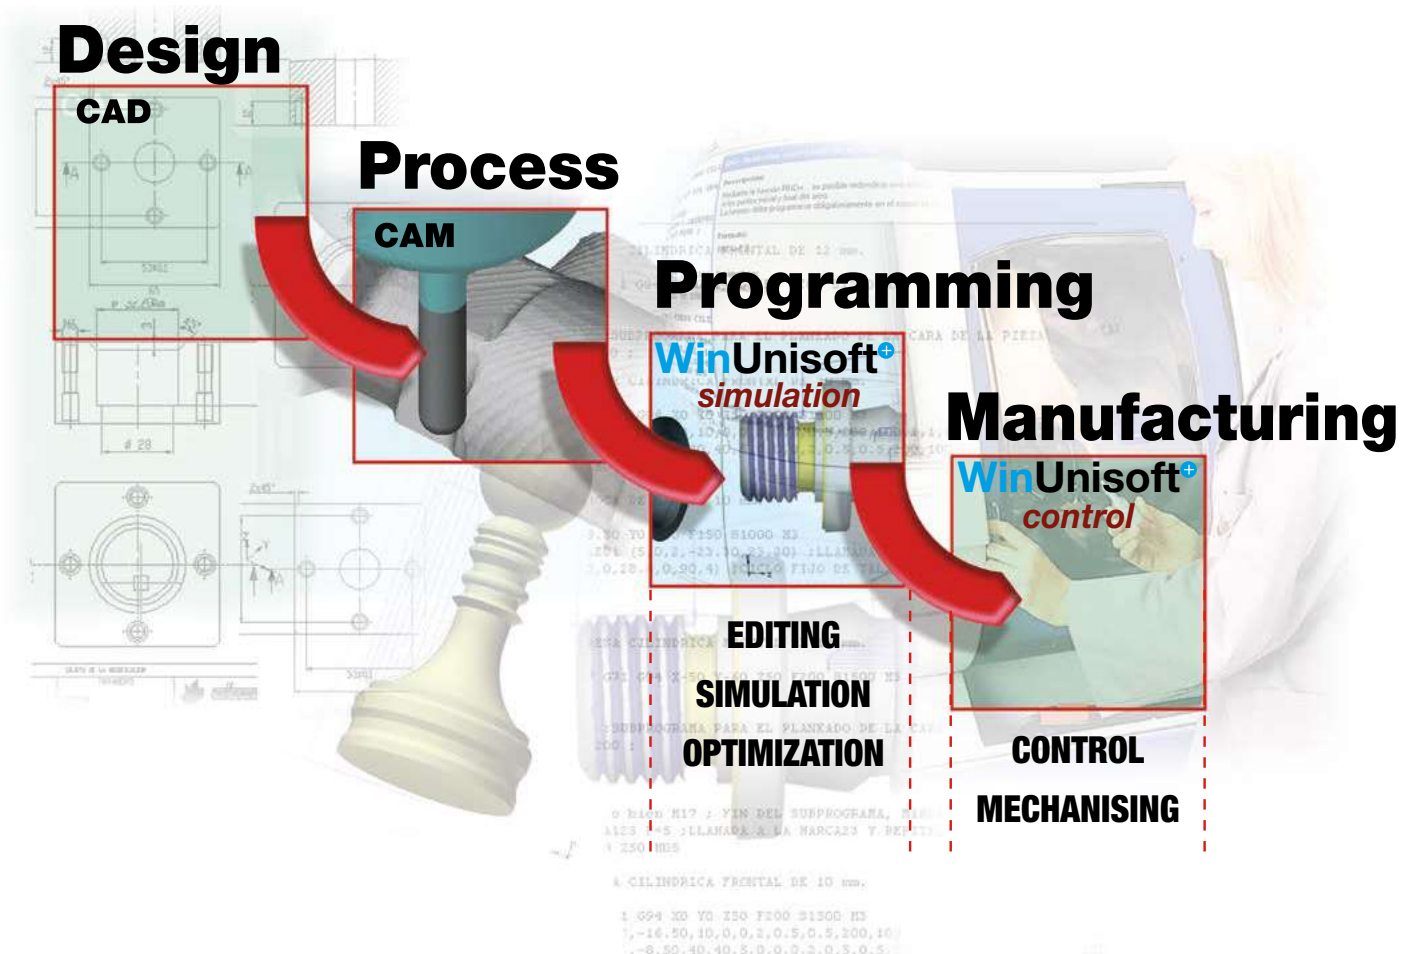

In the process of teaching and learning it is essential to have tools that allow simulation and adaptation of machining programs prior to their actual execution in help avoid problems and reduce the time the machines are used.

Through the use of **WinUnisoft⁺** software, learners can:

- Get to know, understand and master the different programming languages used by the various CNCs.
- Have a first approach to the use of an industrial control thanks to the realistic emulators.
- Make modifications to programs generated by CAD/CAM tools.
- Create their own machining programs.
- Master the basic concepts of machining.

Simulation and control

WinUnisoft⁺ will operate in **Simulation mode** when working with a PC not connected to a machine and in **Control mode** when connected to an ALECOP machine.

Simulation mode

Project based learning

Unlike industrial simulators, where work only takes place with the machining program, with **WinUnisoft+** the exercises are based on what is known as the "Machining project".

Each exercise is a project and the main goal of the student is to realise the drawing in simulation mode before to mechanizing it.

- The main interface of **WinUnisoft+** is the 3D Simulator.
- The control emulator can be accessed at anytime.
- The job can be completed using the didactic resources each project provides.
- Assistance is provide throughout the programming.
- The finished piece can be measured to check the program and chosen parameters.

Save time with ready-to-use projects

34 / Includes lathe and milling machine projects with different training levels.

- It is very easy to setup your own projects, but **WinUnisoft+** comes with a wide library of pieces.
- Ready to use.
- Different levels from basic to expert.

Control mode

Learning by doing

Start controlling the machine using the control of your choice. The main goal is to get the workpiece mechanized.

- The main interface of **WinUnisoft+** the Control Emulator.
- The 3D simulator can be accessed anytime.
- Control of the machine is assisted by the user guides and Help in **WinUnisoft+**.
- Setup of the machine and tool parameters using the control menus or the Assistants in **WinUnisoft+**.
- Programs can be written using assisted programming or just loaded from the network or a pendrive.
- Running the programs will mechanize the workpiece.

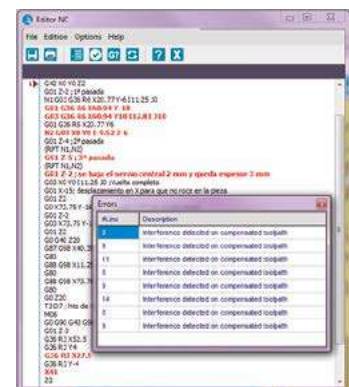

The learning becomes meaningful when you are controlled with a challenge.

Designed for learning

WinUnisoft⁺ has been specifically designed for use in the teaching and learning process without ignoring the technological contents. The program has been provided with specific features that allow students to acquire knowledge very quickly.

- Graphic help menu for programming all ISO functions.
- Adaptation of the software parameters to any tool machine.
- Definition of different types of workpieces and holding systems.
- Simulation in various 3D views with representation of the tool and workpiece.
- Graphic editor of cutting tools with a wide range of predefined shapes.
- Sectioned display of the work-piece from different angles.
- Collision detection of the tool and the handle with the part and the jaw chuck.
- Inspection and measurement of the shape of the part. Detection of basic shapes (arcs, angles, etc.).
- Report wizard with email.
- Control emulators.

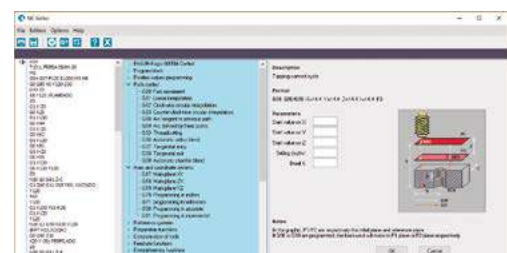

35 /

Learning resources

The software includes all the contents the student will need to learn the basics of CNC machine use and numerical control programming.

Our proposal includes:

- Programming guides for all the included languages.
- ALECOP PC controlled CNC machines with WinUnisoft⁺ working in control mode.
- ALECOP industry NC controlled CNC machines.

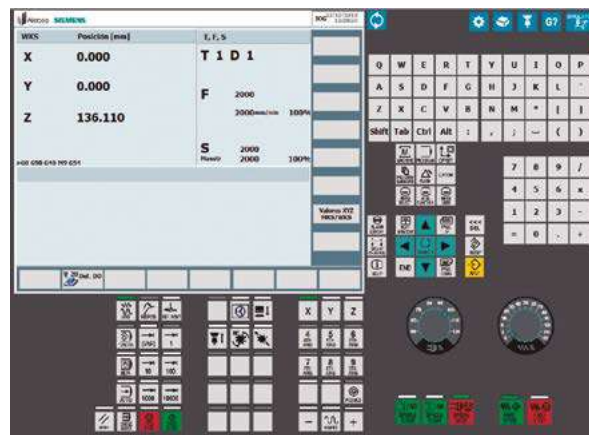

Control emulators

WinUnisoft⁺ has six control emulators that allow the student to learn the real procedures on using CNC machines.

Each emulator has the most characteristic functions to control the machine, and at the same time provides help, if needed, on programming, setting up tools, and setting other mechanizing parameters.

All Alecop's PC controlled machines include a license of WinUnisoft⁺ control.

- Atenea and Hermes had the PC integrated with WinUnisoft⁺ already installed and ready to work. The integral touchscreen gives the system a more industrial feeling.

CNC classroom solution

36 /

Using the machines and the WinUnisoft⁺ software you can configure a CNC Classroom with unlimited programming stations.

Using the features of a local network the teacher can share projects created in the machine with WinUnisoft⁺. The students can use the simulation of WinUnisoft⁺ on their PCs to work with the same machine/tools/workpiece configuration and create their own programs.

The composition could include:

- Programming workstations with WinUnisoft⁺ working in simulation mode.
- PC controlled machines with WinUnisoft⁺ working in control mode.
- CAD/CAM software.

Virtool

Interactive virtual environment for training in the use of tool machines.

System based on interactive 3D graphs and virtual reality techniques which offer innovative possibilities for training.

VIRTOOL Machine is a software designed and developed for training in the preparation and use of swarf start up machines, both conventional and CNC.

With VIRTOOL Machine, students can carry out initial training with a virtual machine which will considerably reduce necessary work time when they move on to a real machine and will help them acquire and reinforce the basic concepts for preparation and machining on conventional and CNC machine-tool.

37 /

The virtual machines work just like the real machines. Each virtual machine, in 3D, is distributed with practice cases or case studies supported by a full set of theoretical content.

Learning by doing

The application is based on problem-based learning and enables independent study. Its advanced educational design is a result of the latest studies conducted in this field and the most up-to-date technology. (PBL Problem Based Learning, Self-Training, Learning by Doing).

Machines available 24 hours

It makes it possible to work on machines with low availability for an unlimited time.

Safe and indestructible machines

Reduces the risk of accidents and damage to the equipment during the training process.

Reduces the cost of the learning process

Reducing the time needed at machines and allowing a truly efficient learning process with less need for support from a teacher.

One machine, one student

It makes the work in the classroom and workshop more flexible, difficult to achieve when working in classrooms where there are only real machines.

Working with a VIRTOOL Machine

The practical activity library, distributed with every virtual machine, is divided into case studies. The classification of cases dealt with is very complete and ranges from the identification of tools to the machining of complex parts, covering the handling of CNC controls.

With VIRTOOL Machine, the user/student performs the learning activities by solving case studies in a virtual environment. Users have all the information required for the case studies for each machine:

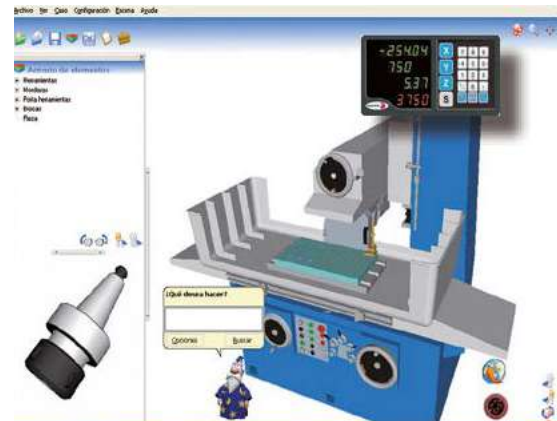

- A full description.
- Back-up materials.
- Instructions are constantly provided and errors notified, helping students to successfully solve all the case studies.
- Online reports can be obtained for student assessment by the tutors.

Interaction with the machine

It is performed through a series of operations which allow the student to machine complex parts:

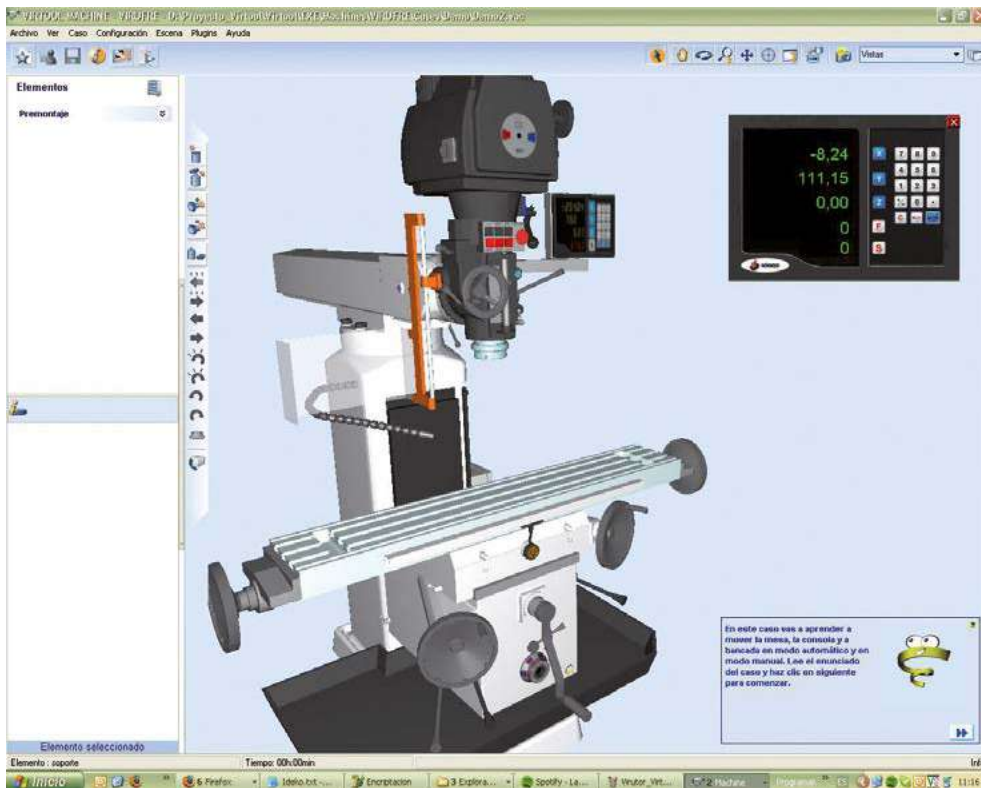

- > **Select:** It allows user to identify elements.
- > **Assemble:** It allows the user to assemble an element on the machine or on another element shown in the scenario window.
- > **Dismantle:** It allows the user to dismantle, dismount or release an element from the scenario.
- > **Close:** It allows the user to tie or fix an element to another on the machine, using a tool if necessary.
- > **Open:** It allows the user to release or loosen an element on the machine, using the appropriate manual tool.
- > **Move:** To move the mobile elements sequentially or continuously.
- > **Machining.**
- > **Turn the part.**
- > **Dimension viewer:** Activates a dimension viewer that works like the real thing.
- > **CNC:** Activates the numerical control simulator for CNC machines. This control is handled and interacts with the machine in the same way as the real control.

Moving in the 3d world or scenario

It is very simple and intuitive. It even includes pre-set displays to resort to if in need of a specific element.

VIRUFRE universal milling machine

39 /

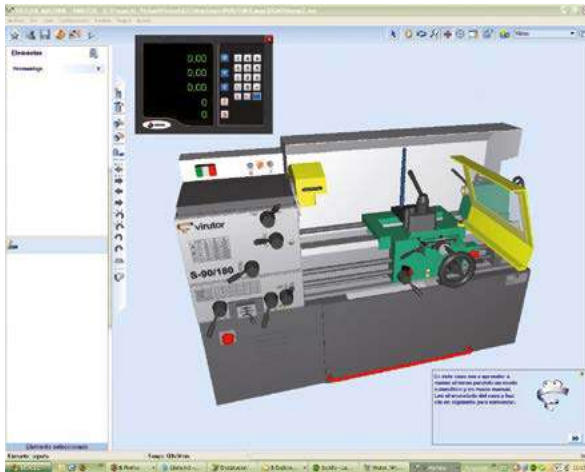

It is the VIRTOOL machine milling machine and with its set of exercises or case studies the student will be able to develop certain skills.

Each case study has a specific aim, studying everything from the machine components to the virtual performance of complex machining processes, highlighting:

- Identification of the machine parts.
- Understanding the dynamics of the machine.
- Types of fastenings and their elements.
- Assembly and adjustment of components.
- Identify and assemble tool holders, tools and auxiliary elements.
- Preparation for machining.
- Handling of the machine.
- Perform basic machining processes.
- Execution of machining processes.
- Complex machining processes.

VIRUTOR Parallel lathe

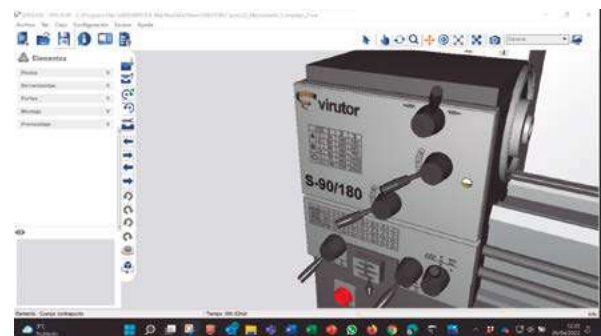

Virutor is the VIRTUOL conventional parallel lathe.

With this and the library of case studies it includes, the following is covered:

- Identification of the machine parts.
- Handling of the machine (movement of carriages, spindle movements).
- Identification and assembly of tools and tool holders.
- Types of fastenings, selection and assembly of parts.
- Calculation and establishment of cutting conditions.
- Safety elements.
- Identification and performance of machining processes.
- Execution of machining processes.

40 /

Licences system

Configure your own CLASSROOM

Configure your training classroom according to your needs at any given time. Choose and combine from the different protection methods available:

> **Web protection with three models.**

- Temporary 4 month license.
 - Temporary 1 year license.
 - Unlimited license.
- In this way you can adapt your resources to your requirements at all times and offer your students the possibility to acquire the product for their training period.
 - Each machine is licensed separately.

Babyplast 6/12

Plastics injection machine

41 /

An industrial machine adapted for training. Ease in implementation, simple programming via touch screen, proportional control on all axes, highly reliable and low maintenance.

Technical characteristics

Piston diameter (mm):	10	12	14	16	18
Injection pressure (KG/cm):	2,650	1,830	1,340	1,030	815
Closing force:	62.5 KN				
Opening force:	4 KN				
Opening travel:	30 -110 mm				
Expulsion Force:	7.5 KN				
Expulsion travel:	45 mm				
Hydraulic Pressure:	130 bar				
Oil tank capacity:	16 litres				
Cycle on empty:	2.4"				
Installed power:	2.95 kW				
Mould thickness:	70:135 mm				
Memorisation of parameters:	100 moulds				
Refrigeration open water circuit					
Refrigeration (optional):	closed table-cooling circuit				
Weight:	165 Kg				
Dimensions:	1,100 x 500 x 700 mm				
Supply:	3x 380 Vac (3 phases+neutral+earth)				

Babyplast is the result of over 10 years' experience in the field of micro-injection. It is specially adapted for training.

- Very easy programming through menus identifiable by icons.
- Synoptics, indicating the status of the sensors and actuators in real-time, allowing the monitoring of production.
- Compact, silent and clean.
- Easy to maintain: modular conception.

An industrial machine

An original mould system

- The housing and plates system is an integral part of the machine.
- Only the imprint block is interchangeable.
- The traditional structure of the mould is respected.
- The advantages of this device are:
 - Reduced cost of moulds.
 - Low production cost.
 - Precision of the parts produced.

42 /

- BABYPLAST 610 is a bench press which makes it possible to inject the majority of thermoplastic materials on the market: PP, PA, ABS, PS, PBT, POM, PPS.
- Totally hydraulic machine with supply unit, pump and deposit built in.
- Display manometers: injection pressure, mould closing pressure.
- Microprocessor of the control unit with colour touch screen.
- USB Connectivity and Ethernet.
- Five piston sizes for perfect adaptation to planned production.
- Control of all movements in closed loop by proportional control.
- It has two programmable outlets for managing cores, air streams, etc.
- Four heating areas with digital PID regulators.
- Control of cooling of four areas by flow meter.

Maximum security

- Emergency stop using push-button.
- Protective screen with detectors.
- Hydraulic safety which blocks any risk of movement when the guard is open.
- Protection of hot areas.
- Part recovery box and ramp for purge outlet.
- CE and CEM certification.

Assembly and mechanical maintenance

These assembly, repair and maintenance kits will allow students to know the main mechanical systems. Thanks to the cutting of each system it is possible to study each one of the different components and their operation.

The material is supplied placed and protected in a box for transport along with the necessary tools for its use.

MM01 – MOUNTING KIT: BALL GRAPH AND CLOSING VALVE Ref.: ZZM0156

43 /

The assembly, repair and maintenance MM01 kit allows to analyse the differences of a ball valve in front of a shut-off valve. Thanks to the cutting of each system it is possible to study each one of the different components and their operation. The material is supplied placed and protected in a box for transport along with the necessary tools for its use.

MM02 – MOUNTING KIT: PLUNGER COMPRESSOR Ref.: ZZM0157

The assembly bench MM02 contains everything necessary to introduce the student to a project of assembly of a compressor of plunger, object under study. The kit is supplied with two piston compressors: one under service conditions and one disassembled. In addition, the necessary tools are included for the assembly of the latter, so that is possible the analysis of the cutting at any time in front of the complete assembly. The bank also has drawers where to store the material, a front panel in which to place the necessary didactic material.

Other kits:

MM03: Assembly and Maintenance: Centrifugal Multi-Steel Pump

MM04: Assembly and Maintenance: Screw Pump

MM05: Assembly and Maintenance: Diaphragm Pump

MM06: Assembly and Maintenance: Plunger Pump

MM07: Assembly and Maintenance: Gear Pump

MM08: Mounting Kit: Hydrodynamics Slide Bearing

MM09: Mounting Kit: Shut-off Valve

MM10: Mounting Kit: Combined Gear

MM11: Kit Gate Flat Wedge Flap and Titled Seat Valve
